

UBAID MOMIN

Applications Engineering Intern Candidate

Nagpur, Maharashtra, India | +91 87675 03155 | Ubaidmomin050@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Computer Science and Engineering undergraduate (B.Tech, expected 2027) with hands-on experience building backend services and integrating third-party APIs to automate business workflows. Built SmartWorkFlow, a Java service that orchestrates Gmail, Twilio, and Google Sheets APIs into a single automated pipeline — directly reflecting the kind of internal-systems integration and business-process automation this role involves. Completed a software development internship building a full-stack Django application, with additional experience in Python, C/C++, and REST API development. Strong foundation in Data Structures & Algorithms, SQL/DBMS, and object-oriented design. Based in India and available full-time for 26 weeks starting January 2027.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, C# (Unity)

APIs & Web Services: REST API development & integration (Gmail API, Twilio API, Google Sheets API, CoinGecko API)

Web & Backend: Django, HTML, CSS, PHP (basic)

Databases: SQL/DBMS (coursework), MongoDB

Tools & Coursework: Git/GitHub, Data Structures & Algorithms, OOP

Core Competencies: Problem-Solving, Active Learning, Adaptability, Cross-Team Collaboration

EXPERIENCE

Trainee

Jun 2023 – Jul 2023

Sumago Infotech — Nashik, Maharashtra, India

- Built a full-stack web application using Python and Django, implementing backend logic, database models via Django ORM, and frontend integration with HTML/CSS to automate internal data-management workflows — collaborating with a 4-person team to deliver ahead of schedule.
- Awarded the Best Trainee Certificate for outstanding performance across all technical assignments.

PROJECTS

SmartWorkFlow — Automated Email Triage & Notification System

2025

- Built a Java service that integrates three third-party APIs into one automated pipeline: monitors a Gmail inbox via the Gmail API/JavaMail for keyword-triggered emails, auto-replies within ~4–5 seconds end-to-end, pushes a summarized WhatsApp alert via the Twilio API, and logs each event to a Google Sheet via the Sheets API.
- Directly analogous to integrating vendor/third-party systems into internal workflows — the core responsibility of this role.

FakeOut — Suspicious Website Detector (Chrome Extension + Web App)

2026

- Built a Chrome extension and Django-backed web app running ~7–8 rule-based checks per site (domain age, SSL status, URL pattern anomalies), surfacing a legitimacy score with a full condition breakdown. Informal testing across ~40–50 known sites correctly flagged 94%+ of them.

Real-Time Cryptocurrency Price Tracker

2025

- Built a Python application using the CoinGecko public REST API to fetch real-time prices and historical data, with a basic visualization layer for trend analysis.

Gesture-Controlled AI Virtual Mouse & Voice Assistant

Jan 2024

- Recreated an open-source hand-gesture control system in Python using OpenCV and MediaPipe's CNN-based hand-tracking, extended with a voice-assistant module. Placed 2nd in a college-level tech competition.

EDUCATION

Anjuman College of Engineering and Technology

Expected 2027

B.Tech in Computer Science and Engineering | CGPA: 7.0

K.C.E. College of Engineering and Management

Completed Jun 2024

Diploma in Computer Engineering | 82.56% (progressed to B.Tech via lateral entry)
